EDUCATION

Bachelor's Degree in Computer Science and Software Engineering

Université du Québec à Montréal

Sep 2022 - Dec 2025

Montreal, QC

SKILLS

Programming Languages	Java C++ Python C C# JavaScript TypeScript Kotlin SQL
Technologies	Angular Git Docker React.js Node.js Spring Android Studio Unity Engine
Concepts	Agile Scrum CI/CD Testing Parallel Programming
Languages spoken	French (native) English (fluent)

EXPERIENCE

Beneva

May 2023 - Dec 2025

Personal Lines Insurance Agent

Laval, QC

- Advise clients on personal insurance products (auto, home), assess their needs and recommend appropriate coverage.
- Manage quotes, calculate premiums, handle payments, policy modifications, renewals and cancellations.
- Provide impeccable and personalized customer service and answer questions regarding claims.
- Licensed by the Autorité des marchés financiers (AMF) and adheres to the code of ethics of the Chambre de l'assurance de dommages (ChAD).
- Apply the following skills: customer service, active listening, situation analysis and autonomy.

PROJECTS

Exercise Application for Seniors

Jan 2025 - Apr 2025

Full Stack Developer

Montreal, QC

- Developed a feature for an application to manage exercise programs for seniors. The feature takes physical test results and generates a customized program based on them.
- Front-end and back-end using React with TypeScript and Node.js/Express frameworks, respectively, with PDF export using PDF-lib.
- Developed an algorithm to automatically generate exercise programs for seniors based on test results. Secure data management with Sequelize ORM (MySQL/PostgreSQL) and comprehensive test suite (Jest, Supertest).

Android NHL Score Tracking Application

Oct 2025 - Present

Full Stack Developer

Montreal, QC

- Developed a native Android application in Kotlin to view real-time NHL game results and detailed statistics, with time navigation over 14 days (± 7 days).
- Implemented MVVM architecture with Jetpack Compose for UI, ViewModel for state management, and Flow/StateFlow for data reactivity. Integrated the official NHL REST API via Retrofit with automatic JSON conversion (Moshi).
- Designed a data mapping system transforming API responses (play-by-play, boxscore) into structured business models including player statistics aggregation (goals, assists) and timezone management for displaying game times in local time.
- Optimized user experience with intuitive navigation between dates, real-time score display, current period tracking, and detail screens presenting goals with players' cumulative season statistics.

2D Platform Game - Unity (C#)

Jan 2025 - Feb 2025

Lead Programmer

Montreal, QC

- Developed a small platform game using Unity Engine and C#, including level design, gameplay mechanics and collision systems with Unity's physics engine.
- Implemented character controls with user input detection (Input System) and camera system following the player for a smooth experience.
- Designed and integrated essential gameplay mechanics: jumping with ground check, smooth movement with acceleration/deceleration, collectibles management and scoring system.
